

Quick recap

The team met to discuss progress on their mortgage lending analysis project, focusing on completing a paper and presentation about racial covenants' impact on loan approval rates in Hennepin and Ramsey counties. Alexander shared his successful use of ArcGIS and AI to process Ramsey county data, while Aidan presented detailed findings from the Hennepin analysis including property value correlations, approval rates by race, and logistic regression results showing that while covenants had some influence, race was a more significant factor in loan approval outcomes. The team decided to focus their presentation on 2-3 key mitigation strategies, with Alexander handling PowerPoint preparation, Aidan working on methodology and findings sections, and Chijioke contributing to mitigation strategies. They set a 3 PM deadline for completing the paper, with team members planning to work overnight and the following day to meet this deadline.

Next steps

- Aidan: Complete the Ramsey analysis tonight and add markdown/comments to the shared document to explain methodology
- Alexander: Write about data collection and methodology, including explanation of Ramsey data formatting, in the shared document
- Aidan & Alexander: Collaborate on writing the methodology section
- Alexander: Begin creating the PowerPoint presentation
- Chijioke: Work on proposed mitigation strategies (with Aidan)
- bmf3m@mtmail.mtsu.edu: Write the limitations and future work section
- All team members: Complete their assigned document sections by 3pm tomorrow
- bmf3m@mtmail.mtsu.edu: Reshare the link to the Google Doc with Chijioke
- Aidan: Check document progress at 3pm and inform team if more work is needed before submission
- Alexander: Add note about Ramsey data being a work in progress and not complete in the document
- bmf3m@mtmail.mtsu.edu: Add notes in the document indicating who is responsible for each section
- Chijioke: Work on finance section
- Alexander: Work on findings section

Summary

Ramsey Code Analysis Progress Update

The team discussed ongoing work on code analysis, with a focus on Ramsey data. Aidan reported completing a Hennepin analysis using Alexander's data and confirmed he could apply the same process to the Ramsey data, estimating it would take 10-15 minutes. Alexander offered to work on the Ramsey code and help with the Google Doc, while noting that Chijoke had not responded to communications. The team acknowledged that completing the work by the original deadline was no longer feasible.

Covenant Impact on Loan Approvals

Aidan presented analysis results comparing property values and loan approval rates between covenanted and non-covenanted areas, finding that covenanted areas had higher property values, higher loan amounts, and higher approval rates. The analysis included logistic regression models examining the influence of race, covenants, and other factors on loan approval, with race being more influential than covenant density or count in the approval process. The team discussed extending the analysis to include both Ramsey and Hennepin data from 2023 for comparison purposes.

Document Analysis Strategy Discussion

The team discussed their approach to completing a document analysis, deciding to focus on 2-3 key findings from both the hen PIN and Ramsey analyses for comparison. They agreed to structure the document with sections on methodology, data bias analysis, county comparisons, implications for modern lending, proposed mitigation strategies, limitations, and future work. Aidan will work on the Ramsey analysis and add markdown explanations, while Alexander will handle methodology documentation, and they plan to emphasize mitigation strategies as the main focus of their presentation.

Research Paper Task Division

The team discussed task assignments for completing a research paper about lending practices and mitigation strategies. Alexander agreed to handle historical context and PowerPoint presentation work, while Aidan will cover methodology and coding analysis. Chijioke will contribute to the mitigation strategies section. The team set a 3 PM deadline for completing the paper sections, with Aidan planning to finish his analysis by 9:30 PM the previous day. The discussion also confirmed that the historical context and covenant explanations were already covered in the introduction section of the document.
